

FINTWIST CHIP CARDS ARE HERE!

Fintwist Paycards now come with chip technology installed directly on the card, making your money even more secure.

Why is chip technology important?

- **Increased Confidence in Transactions:** Knowing that your card is harder to clone and offers better protection in case of theft can increase your confidence in using it for everyday transactions.
- **Ease of Use Abroad:** If you travel, having a chip card can make transactions smoother and is often necessary in places that no longer accept magnetic stripe cards.
- **Overall Financial Safety:** With decreased chances of card fraud, you might find a direct impact on your financial safety, potentially dealing with fewer instances of fraudulent charges that would require resolution.
